# New Crazybee F4 V3.0 Flysky version bind procedure

1.Connect to Betaflight configurator then move to CLI Tab, then Type the BIND Code "bind_rx_spi"

The red LED at the bottom of the V3.0 flight controller will starting to blink fast, this indicate the onboard receiver is in bind mode

LED Status Meanings
- Blinking Fast: Binding mode
- Blinking Slowly:No RC Signal
- Solid: Normal work or binding successful

2.Turn on your transmitter and Choose AFHDS-2A for the receiver mode(Some Flysky transmitter default setting is AFHDS-2A). Then ENTER RX bind, if bind successful the Red Led at the bottom of the flight controller will getting to be solid. Then reconnect the USB and exist bind mode . Now move to receiver tab of the Betaflight configurator to check the receiver works
